

# Online Appendix for Article: It Might Not Make a Big DIF: Improved Differential Test Functioning Statistics That Account for Sampling Variability

*Chalmers, Counsell, and Flora*

*February 25, 2016*

On-line appendix to accompany *It might not make a big DIF: Improved Differential Test Functioning statistics that account for sampling variability*. The tables contain simulation results pertaining to detection rates ( $sDTF$ ) and cut-off values greater than the 05% percentile ( $uDTF$ ) when varying sample size (500, 1000, 3000), DIF size (0.5 and 1.0), test size (30, 40, and 50), parameters containing DIF ( $d$ ,  $a$ ,  $d$  and  $a$ ), and number of items containing DIF (4, 8, and 12 in the 3PLM design, and 4, 6, and 8 in the GRM design).

	condition	test_size	DIF_items	DIF_size	sDTF_0.05	uDTF_2	uDTF_3	uDTF_4
